

STORING AND HANDLING LIQUIDS: ENVIRONMENTAL PROTECTION BUTCHERS PAPER ACTIVITY

During the afternoon session these photos will be displayed on butchers paper around the room. There will be questions underneath each, as shown. During the action plan development session participants will be given the opportunity to stretch their legs and write their ideas on the butcher's paper. At the end of the time allocated for the Action Plan development, we will report back on what was written for these photos.

What is the environmental issue of concern in these photos?

What scenario might have brought about the construction of such a bund?

What physical measures could be put in place to rectify this situation?

What procedural or ongoing management measures could be put in place?

What is the pollution risk?

What physical measures could be put in place to rectify this situation?

What procedural or ongoing management measures could be put in place?

Would a procedural or physical measure be more suitable?

In what ways is this bund adequate as secondary containment?

In what ways is it inadequate?

What physical measures could be put in place to rectify this situation?

What procedural or ongoing management measures could be put in place?

What could happen?

How could it be prevented?

What factors contributed to a risk of pollution?

What built/engineering controls would prevent the situation?

What management (inspection, maintenance, job descriptions, training) controls would prevent the situation?

In what ways is this storage situation adequate in preventing pollution?

In what ways is it inadequate?

What physical measures could be put in place to rectify this situation?

What procedural or ongoing management measures could be put in place?
